Vocabulary Set: progEssentials + progExpanded

130 TERMS COMPLETED	**88%** ACCURACY	**38m 54s** TIME ELAPSED	**N/A** WORDS PER MINUTE

Term Coverage: 148 of 50 terms (296.0%)

✓ PROFICIENCY DEMONSTRATED

Terms Requiring Review (18)

Scope: Area where variables are accessible.

Parameters: Placeholder variables in a function definition that receive argument values.

Parameters: Variables in function definition receiving arguments.

Pascal Case: A naming convention where the first letter of each word is capitalized, with no spaces or underscores (e.g., MyVariable).

Initialization: Assigning an initial value to a variable.

Algorithm: Step-by-step instructions to solve a problem.

Arguments: Actual values passed to a function when calling it, corresponding to its parameters.

Requirements Analysis: The initial SDLC phase where user needs and specifications are gathered and documented to define the problem scope.

Low-Level Language: A programming language with instructions directly resembling machine code, offering fine control over hardware but requiring more complex syntax.

Release & Maintenance: The final SDLC phase involving deployment of the software and ongoing updates, bug fixes, or enhancements.

White Space: Spaces/tabs improving code formatting.

Snake Case: A naming convention using all lowercase letters with words separated by underscores (e.g., my_variable).

Software Development Life Cycle (SDLC): Phased approach: requirements, design, implementation, testing, maintenance.

Snake Case: Naming: lowercase with underscores.

Camel Case: Naming: first lowercase, subsequent words capitalized.

Camel Case: A naming convention where words are concatenated, starting with lowercase, and each subsequent word capitalized (e.g., myVariable).

White Space: Non-printing characters like spaces, tabs, and blank lines used to enhance code readability and structure.

Abstraction: Hiding details to show only essentials.
